

# Webinar

## Local Climate Action Planning – Experiences from India

29 June 2015, 11:00 UTC/GMT

**Transformation - Urban Opportunities - Climate Change (TUrbOCliC)**

Cross-sectoral group of the TUEWAS and SNGA network of GIZ

# Programme

- **Welcome**  
Eva Ringhof, Social Development Specialist and Joint Speaker of TUrbOCLiC
- **Presentations:**
  - **Promoting Low Emission Urban Development Strategies in Emerging Economy Countries**  
Soumya Chaturvedula, ICLEI-SA, Urban-LEDS, Energy and Climate Program Coordinator
  - **Climate Proofing Vulnerable Coastal Communities**  
Mr. Manjeet Singh Saluja, GIZ Technical Advisor, AdaptCap
  - **Sustainable Urban Habitat Action Planning for Nashik**  
Vaishali Nandan, GIZ, Senior Advisor and Joint Speaker of TUrbOCLiC
- **Discussion and Wrap-up**

# Project Cities

- **Project Countries:** Brazil, South Africa, **India** & Indonesia
- **8 Model cities**
  - Recife and Fortaleza (Brazil)
  - **Thane and Rajkot** (India)
  - Middelburg and KwaDukuza (South Africa)
  - Balikpapan and Bogor (Indonesia)
- **21 Satellite cities**
  - 6 cities from India including Shimla, Coimbatore, Gwalior, Panaji, Pimpri-Chinchwad and Nagpur
- **8 European cities** to facilitate and promote cross – learnings

# GreenClimateCities methodology

 **GreenClimateCities**  
LOW EMISSION. LOW RISK. LIVEABLE!

Working methodology to help Local Governments create an adequate institutional framework for long-term **Urban Low Emission Development Strategy**, planning and projects.

# Thane City Baseline Energy Use, 2012-13

## Energy Use by Sector

- Residential
- Commercial/ Institutional
- Industrial & Agricultural Energy Use
- Mobile Units (On-Road Transportation)

## Energy Use by Source

- Electricity
- Kerosene
- LPG
- PNG
- Diesel
- Petrol
- CNG

## Electricity Consumption per Sector

- Residential
- Commercial/ Institutional
- Industrial & Agricultural Energy Use

# Thane City Baseline GHG Emission, 2012-13

## Sectoral GHG Emissions

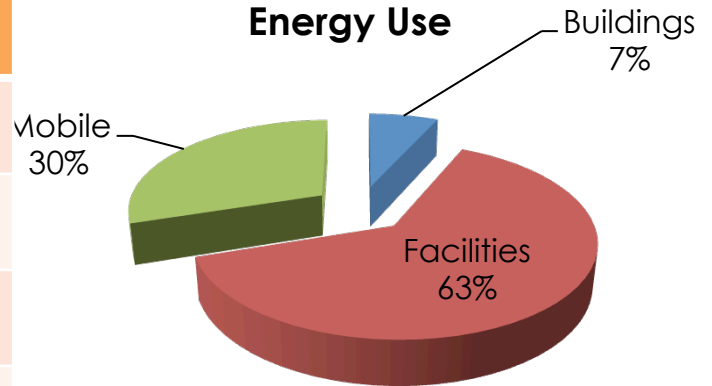

- Residential
- Commercial/ Institutional
- Industrial & Agricultural Energy Use
- Mobile

Sector	GHG Emission (Tonnes of CO <sub>2</sub> e)
Residential	817458.06
Commercial/ Institutional	403058.72
Industrial & Agricultural Energy Use	316034.669
Mobile (On-Road Transportation)	242660.23
Waste	77897.08
<b>Total</b>	<b>1857108.765</b>

Particular	Unit	Number
Total Energy Consumption	GJ	1,21,85,583
Per Capita Energy Consumption	GJ	6.06
Total GHG Emission	Million Tonnes of CO <sub>2</sub> e	1.86
Per Capita GHG Emission	Tonnes of CO <sub>2</sub> e	0.92

# Government Inventory module

Government Module Sector	Energy Use (GJ)	GHG Emission (Tonnes of eCO <sub>2</sub> )
Buildings	23,486.80	4893.96
Facilities	2,18,609.17	49951.24
Mobile	1,03,825.05	7830.15
Total	3,45,921.02	62675.36

- Total Government level operations consumed 345921.02 GJ of energy and emitted 62675.36 of eCO<sub>2</sub> Tonnes in the year 2012-13
- Municipal facilities generated 79.70 %, whereas municipal transportation and buildings accounted 12.49% and 7.81 % respectively of total local government module emissions.

# Pilot Project Implementation - Thane

1. Energy efficient street lighting through Energy Service Company (ESCO)
2. Awareness program on Climate Change and Low Carbon practices in Schools
3. Installation of Energy Efficient LED lights in selected slum areas
4. Low emission interventions in TMC School
5. Drivers Training Program for Thane Municipal Transport department (TMT) for emission reduction through fuel conservation/efficiency

# Rajkot City Baseline Energy Use

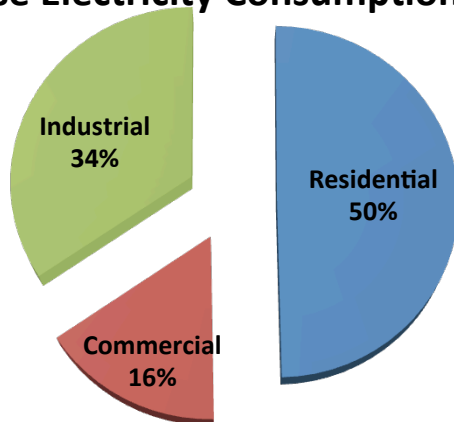

**Sector-wise Energy Consumption, 2012-13**

**Fuel-wise Consumption, 2012-13**

**Sector-wise Electricity Consumption, 2012-13**

# Rajkot City Baseline GHG Emission

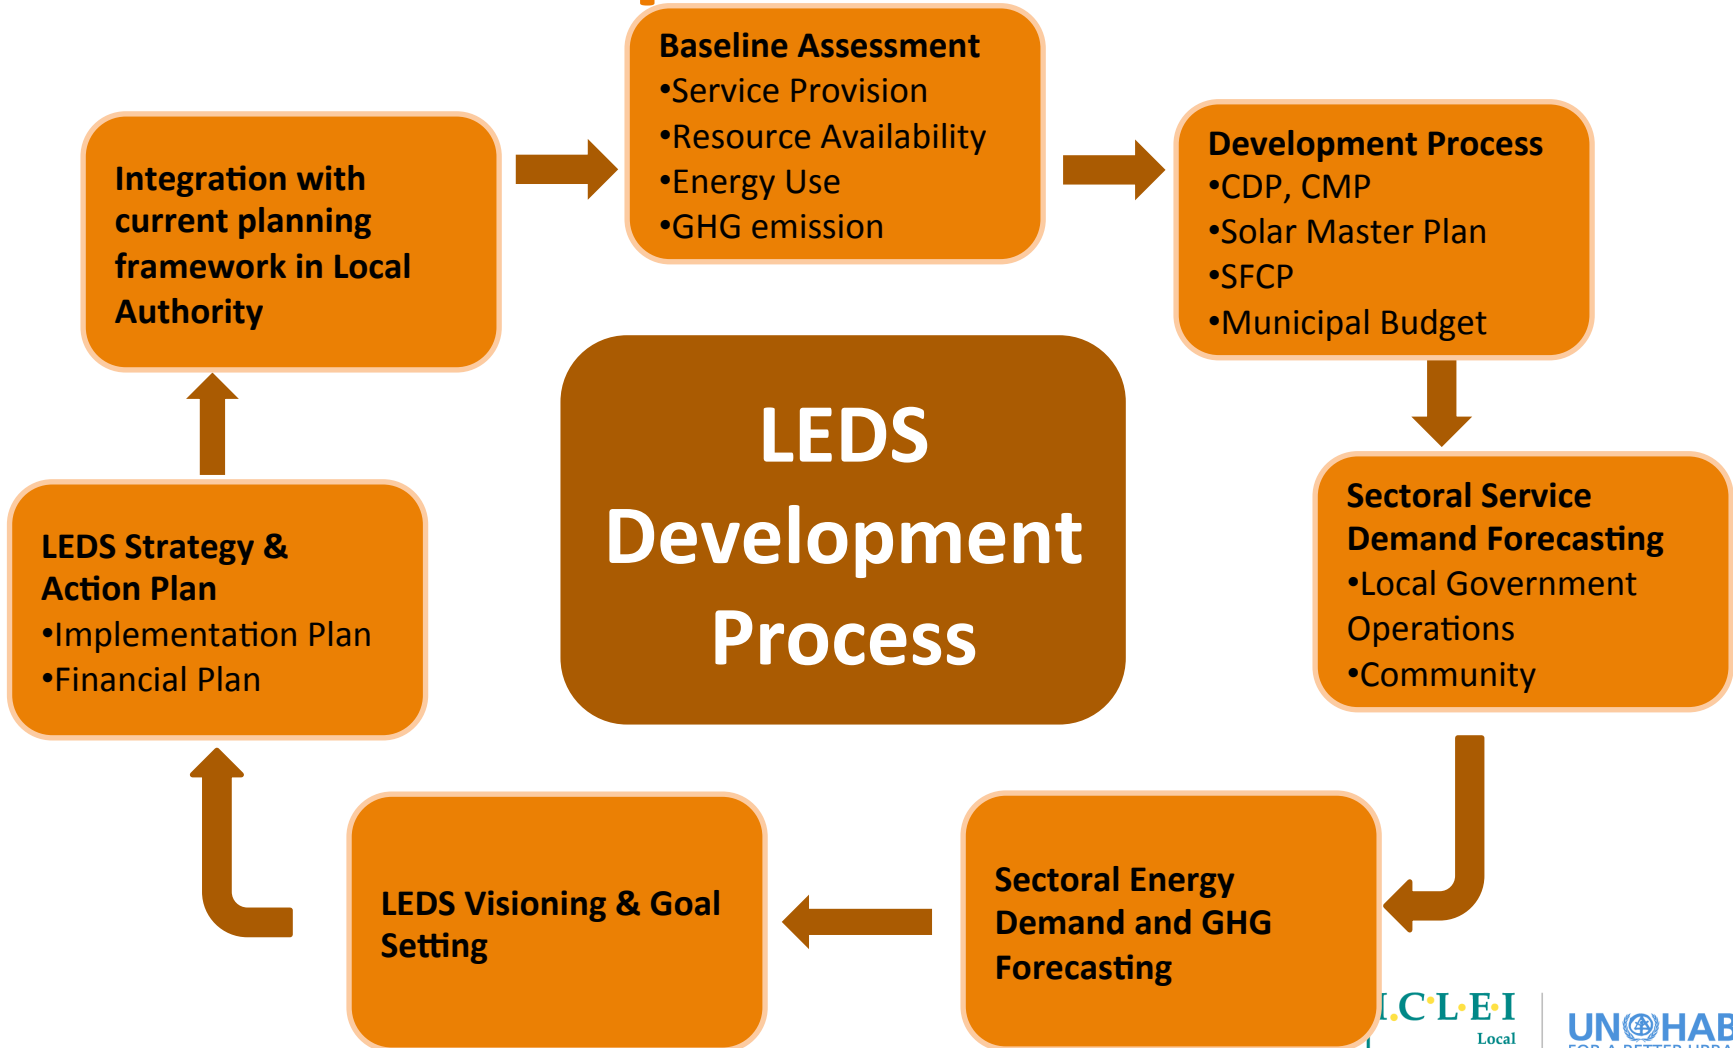

**Rajkot Sectoral GHG Emission, 2012-13**

Sector	GHG Emission (Tonnes of CO <sub>2</sub> e)
Residential	7,10,551.32
Commercial	1,85,710
Industrial	3,45,054
Transportation	4,32,030
Waste	29,565
<b>Total</b>	<b>17,02,912</b>

Particular	Unit	Number
Total Energy Consumption	GJ	16,332,841
Per Capita Energy Consumption	GJ	11.72
Total GHG Emission	Million Tonnes of CO <sub>2</sub> e	1.7
Per Capita GHG Emission	Tonnes of CO <sub>2</sub> e	1.22

# LEDS Development Process

The screenshot displays the website's user interface. At the top, there is a navigation bar with the 'Sg. solutionsgateway' logo, the 'URBAN LEADS' logo, and links for 'ABOUT', 'SUPPORTERS', 'CONTACT', and 'LOGIN'. Below this is a breadcrumb trail: 'Home > Solutions > Landfill gas recovery for energy production'. A sidebar on the left contains a menu with icons and labels for 'Workflow', 'Resources', 'Experts', and 'Finance Tool'. The main content area features a 'User Feedback' section with a 'Submit Feedback' button. The primary article is titled 'Landfill gas recovery for energy production' and includes an image of industrial machinery. The article text discusses the biological decomposition of organic matter in landfills, the production of methane (CH<sub>4</sub>) and carbon dioxide (CO<sub>2</sub>), and the benefits of gas recovery for energy production and climate change mitigation. It also mentions that the collection and treatment of municipal solid waste is typically the responsibility of local governments.

**Submit Feedback**

**Landfill gas recovery for energy production**

Organic matter present in landfill experiences a biological decomposition under anaerobic conditions with an accompanying production of methane (CH<sub>4</sub>) and carbon dioxide (CO<sub>2</sub>) which contribute to the greenhouse effect and climate change. Sanitary landfills install a piping system for the removal of the landfill gas generated, thus minimizing combustion and explosion hazards. Even simple flaring of the landfill gas can minimize the climate change impact of waste disposal by converting methane into carbon dioxide, since the global warming potential of the first is over twenty times larger than the latter's. Going one step further, the landfill gas can be collected and used for heat and/or electricity production, displacing the use of fossil fuels for the production of the same amount of energy. Since the collection and treatment of municipal solid waste usually lies within the responsibilities of the Local Government, municipalities can have a very direct influence on waste and waste-to-energy strategies, and often play the role of facility owner.

**Motivation / Relevance**

Landfill CH<sub>4</sub> is the largest source of GHG emissions from the waste sector. Global CH<sub>4</sub> emissions from landfills are estimated to be 500-800 MtCO<sub>2</sub>e/year. [2] While the rate of waste disposal in landfills in the EU is decreasing (waste disposal in EU-27 decreased from 54% in 2004 to 45% in 2010 [11]), rates of landfill CH<sub>4</sub> emissions are expected to increase in developing countries due to an increased use of controlled and sanitary landfills for waste disposal to control open dumping. In Brazil, 89% of the waste generated in 2000 was either disposed of on open dumps and in landfills (controlled and sanitary) [8].

Improved landfill site management through converting open dumping and burning to engineered landfills using cover material results in higher rates of CH<sub>4</sub> generation and therefore it should go hand in hand with making use of the CH<sub>4</sub> for energy generation. CH<sub>4</sub> is emitted both during and after the period of activity of landfills; therefore, projected sites and landfills being operated should assess the viability of installing gas recovery systems. Landfill CH<sub>4</sub> can be used to fuel industrial boilers, to generate electricity and/or heat, and purified to produce a substitute for natural gas after the removal of CO<sub>2</sub> and trace components [2].

In addition, if the gas generated in the waste disposal site is not removed, it raises safety hazards: the gas accumulation leads to deformation which may damage lining, may leak into neighboring buildings and may lead to spontaneous combustion.

# Pilot Project For Reducing GHG Emissions of Municipal Services

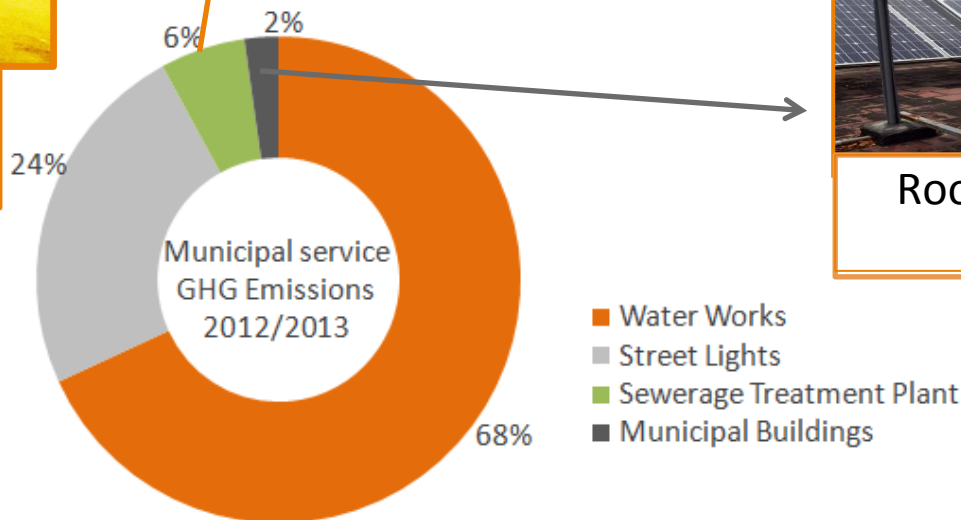

Installation of DEWATS

Energy efficiency in Street lighting

Rooftop SPV installation at Municipal School

# Pilot Project Implementation - Rajkot

1. Energy efficiency in street lighting by replacement of sodium lights with LEADS
2. Installation of DeWAT system at Jilla Garden with energy generation (biogas/electricity)
3. 20 kW grid SPV installation at Sarojini Naidu Municipal School
4. Revamping of Energy Park

# carbonn Climate Registry (cCR)

- carbonn Climate Registry (cCR) global reporting platform  
As of 15 Feb 2015 the 37 Urban-LEDS cities had reported:
  - 28 commitments
  - 379 actions
  - 33 community-scale GHG inventories (performances)
  - 31 government GHG inventories
- Earth Hour City Challenge 2014/2015 recognized 2 Urban-LEDs cities as country finalists:
  - Belo Horizonte and Thane

## 3 areas of reporting

**Commitments**  
(Climate and  
Energy)

**Performances**  
(GHG inventories)

**Actions**  
(Adaptation and  
Mitigation)

# Financing LED Actions... TAP

*Climate Proofing  
Vulnerable Coastal Communities*

- Manjeet S Saluja  
GIZ India

## Project at a glance

- Funding: EuropeAid (European Commission)
- Duration: 3 years
- Location: 18 rural villages, 6 cities (in Andhra Pradesh & Tamil Nadu, India)
- Partners: GIZ (lead), adelphi, ICLEI , Academy of Gandhian Studies (AGS), AVVAI Village Welfare Society (AVVAI)
- Key activities:
  - Vulnerability & needs assessment (V&NA)
  - Pilot projects and replication thereof
  - Capacity building
  - Locally adapted CCM and CCA guides
  - Assistance strategy to local authorities
  - Visibility & networking

## Goal

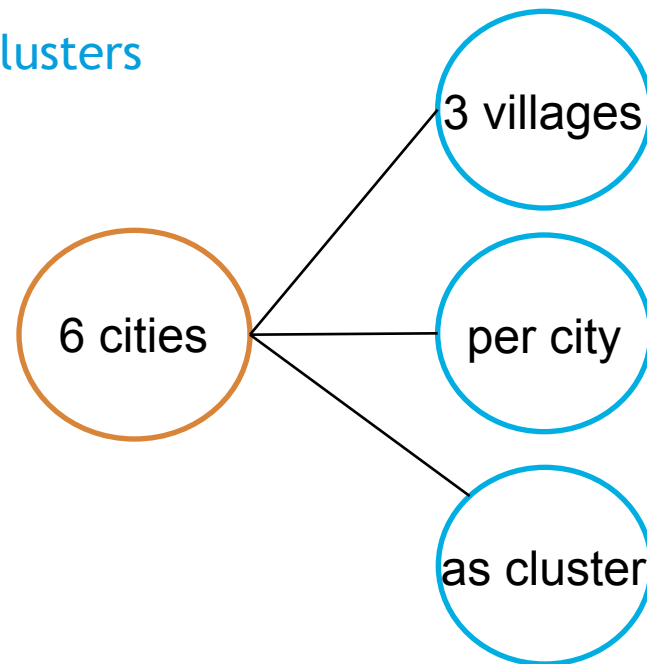

- Reduce the vulnerabilities of coastal communities and cities in Tamil Nadu and Andhra Pradesh, India, to climate change and strengthen capacities of local authorities and the population on climate change adaptation (CCA), climate change mitigation (CCM) and disaster risk reduction (DRR).

## Locations

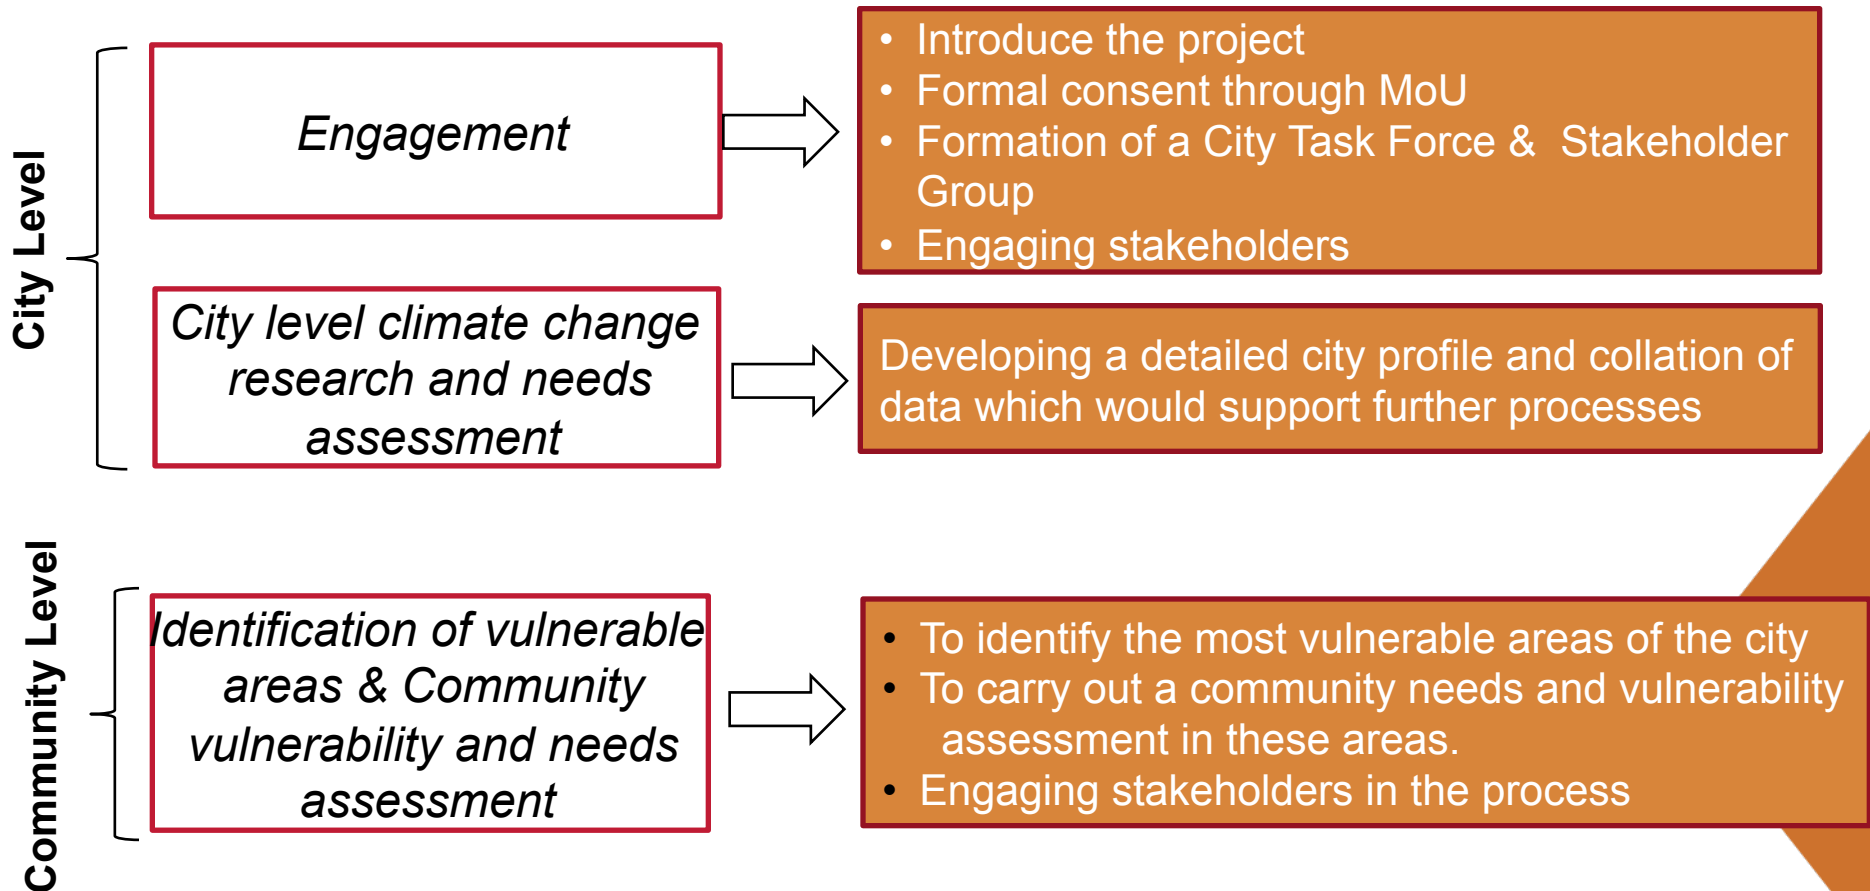

6 cities and 18 villages forming 6 clusters

Andhra Pradesh cluster cities: Vishakapatnam, Ongole, Kavali

Tamil Nadu cluster districts: Cuddalore, Nagapatinam, Thiruvallur

# AdaptCap - The Urban Approach

# Urban Tools

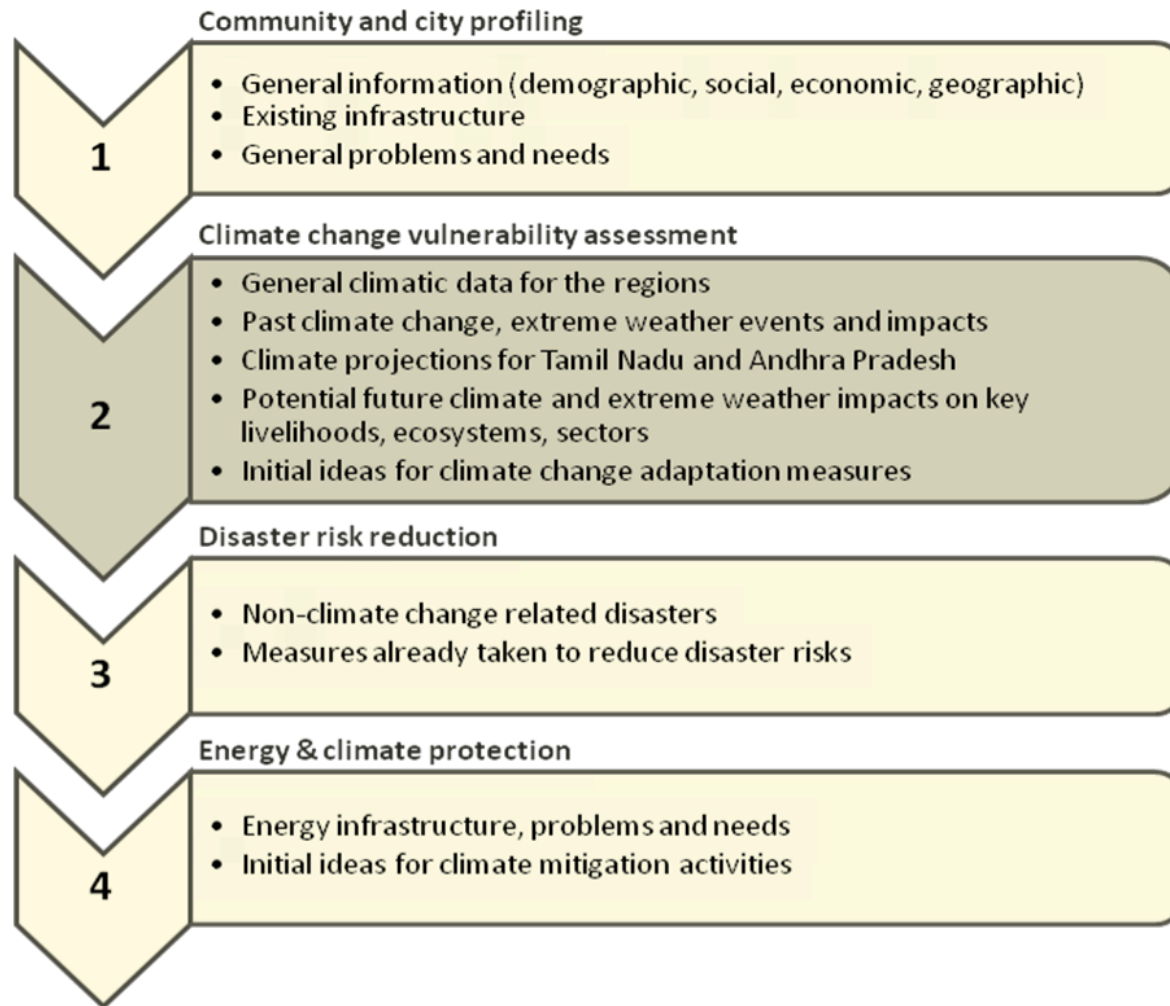

## Shared Learning Dialogue Process

- SLD helps both decision-makers and those with a stake in outcomes to have a fuller spectrum understanding of factual conditions and operational constraints and recognises the available sources of information and its quality.
- The SLD meeting was planned to be a half day event divided into five parts:

# Urban Tools

## City Level Climate Change Research

# Urban Tools

## Local Adaptation and Mitigation Guides

- Local adaptation and mitigation guides developed for all the 6 six cities based on the vulnerability and needs assessment done in these cities.
- These LAMGs had the following structure:

## Awareness raising and capacity building

- Training material has been developed for capacity building of local authorities

### Training modules as presentation

**Training Course**  
Climate Proofing Vulnerable Coastal Communities

**The 5 Modules of the training course**  
The 5 modules represent the outline for moderated community workshops

- Module 1: Introduction to the project
- Module 2: Introduction to climate change and the concepts of adaptation, mitigation and disaster risk reduction
- Module 3: Key development sectors & climate impacts
- Module 4: Adaptation and mitigation options
- Module 5: Local adaptation and mitigation guide (including OBM)

### Training manual document

**Facilitator's Manual**  
Adapt Cap  
Climate Proofing Vulnerable Coastal Communities

### Accompanying training workbook (Excel)

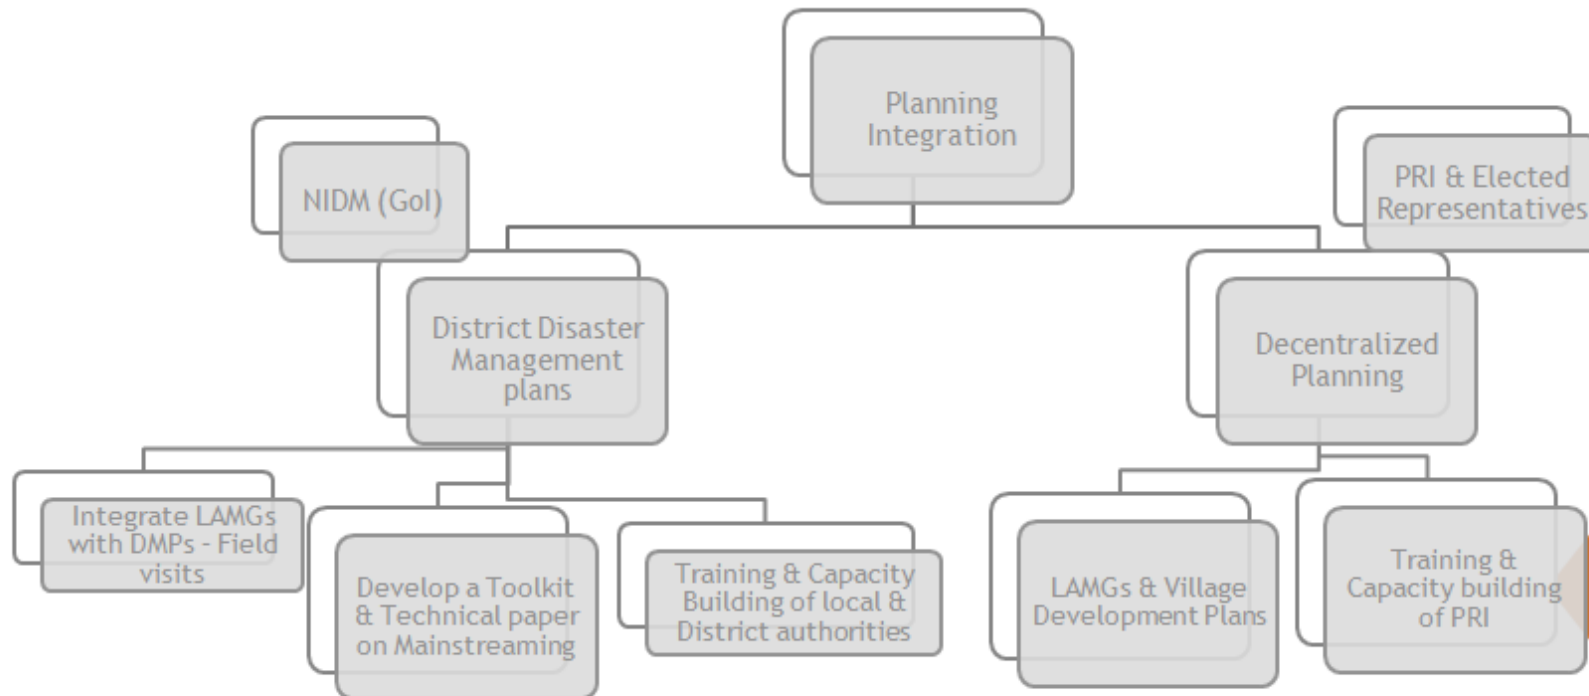

Climate proofing coastal communities in Andalus, Portugal and Tamil Nadu  
*Consequences of past weather events*

Community exercise 2.1

Climate change experienced, relevant weather event	Impact on the community, main problems caused	Likelihood / severity of event	Risk and adaptation measures implemented / action taken in the past

## Planning Integration

- Top - down Planning: State Action Plans for Climate Change
- Bottom - up Planning: District and PRI level for mainstreaming

## Outputs

- Formation of the City Task Force in each city for identification of core issues, review existing schemes and initiatives and identify potential measures and financial schemes
- In Ponneri Town Panchayat, VNA replicated in 18 wards for assessing the needs and is being presented to the Chief Minister, TN by the Chairman
- In Kavali, the measures suggested in the LAMGs are being taken up by the RDO and Municipal Commissioner
- The DC, Vizag, DC, Thiruvallur and Relief Commissioners AP and TN nominated nodal officers for supporting the development of VDMPs and DDMPs with NIDM, GoI
- Implemented a pilot for Ongole municipality, AP on solar backup for RO plant

# Learnings

Climate Proofing  
Vulnerable Coastal Communities

## ■ Opportunities

- Cities are large economies and growth is critical to Climate change
- Local leaders on the front line of climate change
- Ability to mobilise resources
- Freedom to innovate and try new solutions

## ■ Challenges

- Different Layers of Policy making
- Convergent action missing among different departments
- Lack of local climate data for decision making
- lack of capacity, resources and forward-thinking planning

## ■ Drivers for Action

- Vulnerability assessments - participatory, trusted and communicated well
- Bottom-up pressure/support from community groups
- A *crisis* can create political will
- Put forward the *business case* for action

# **Sustainable Urban Habitat Action Plan (SUHAP) for Nashik**

**Supported by GIZ under Indo German Environment  
Partnership (IGEP)**

Vaishali Nandan  
Senior Advisor, GIZ-IGEP

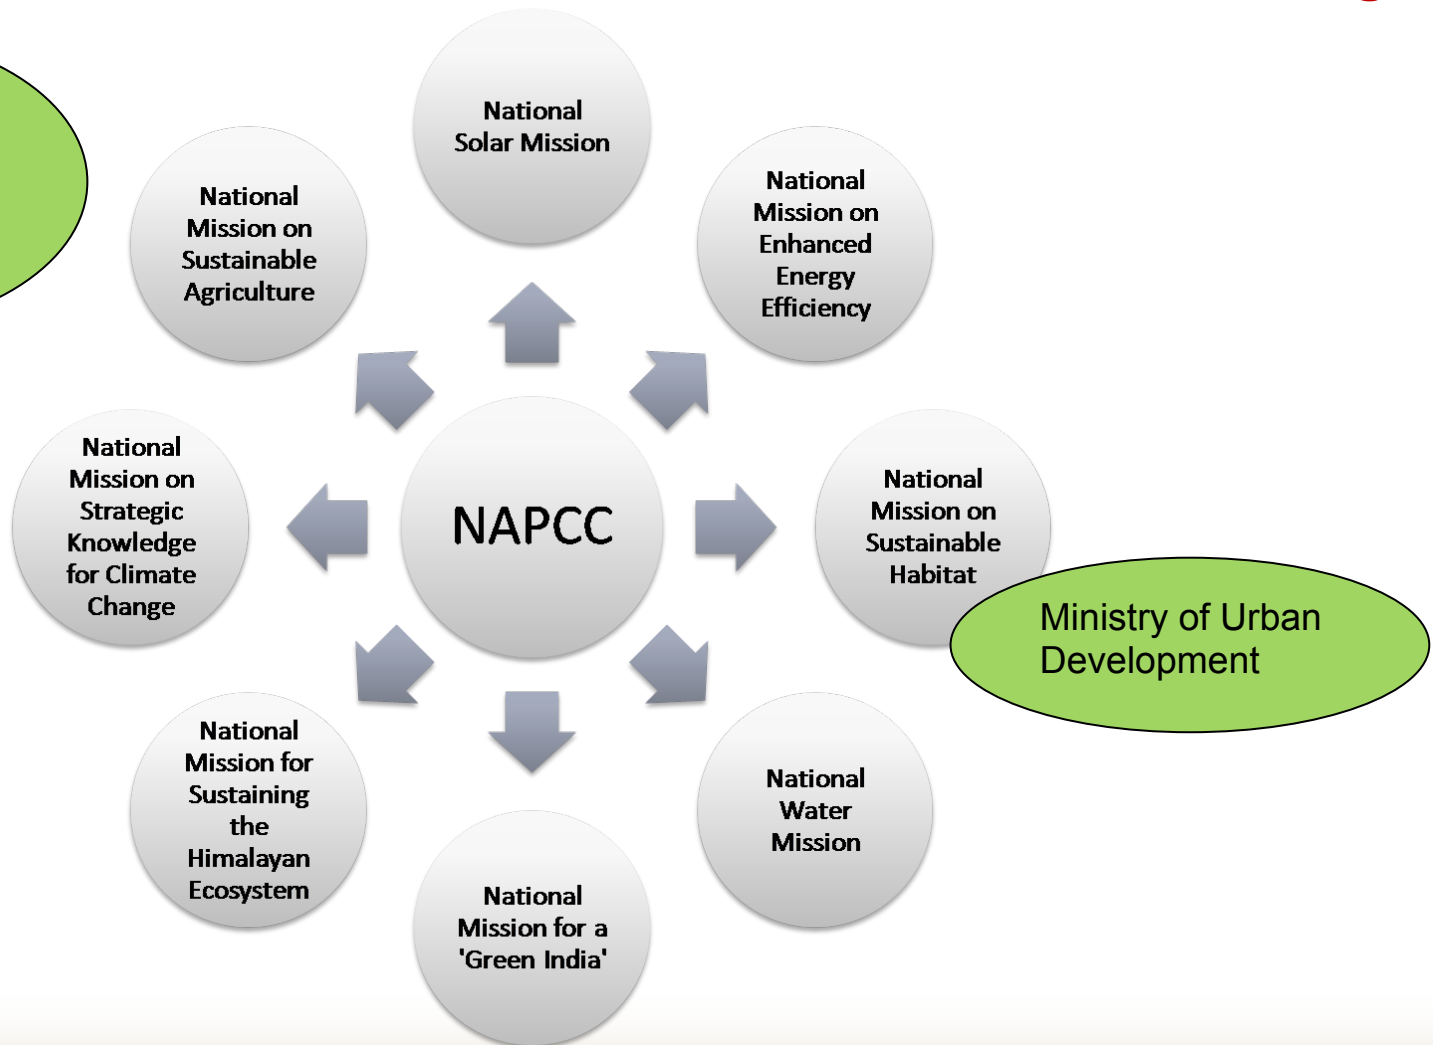

## SUHAP: An Unique Initiative

- A City Climate Action Plan in line with the MoUD's National Mission on Sustainable Habitat (NMSH)
- **Overall objective:**
  - Pilot test a replicable SUHAP process that would facilitate the application of the NMSH in an Indian city
  - Build the capacity of a regional training center to enable the replication
- SUHAP addresses both adaptation & mitigation
  - assess energy use and corresponding GHG emissions
  - Assess climate vulnerabilities in the city
  - develop appropriate action plans for sustainable habitats (SUHAPs)

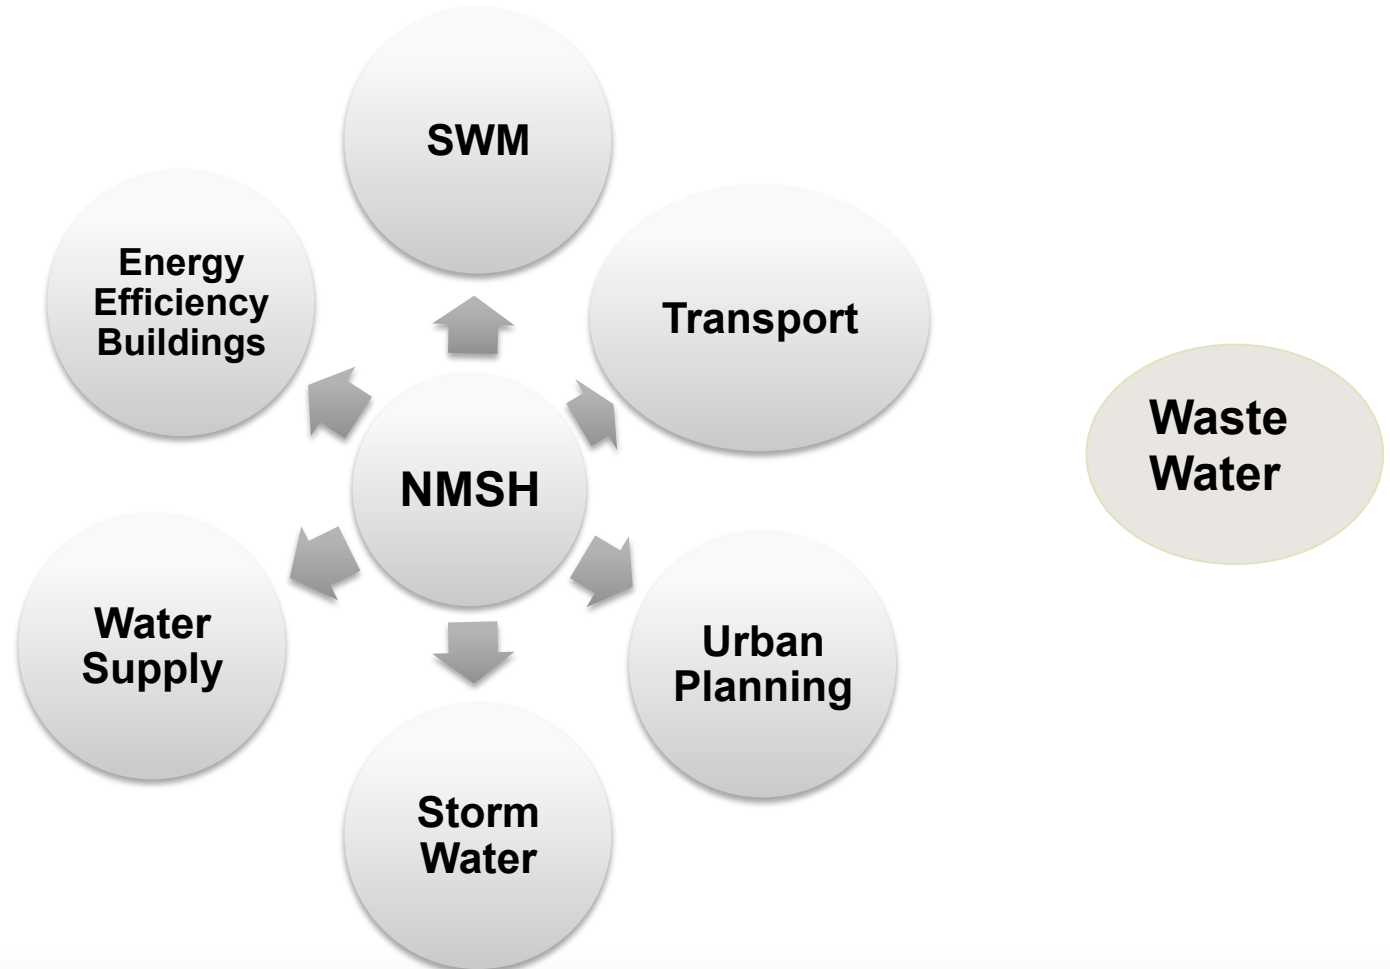

# Enabling Framework: National Action Plan for Climate Change

8 Missions  
Lead: Ministry of  
Environment  
Forests & Climate  
Change

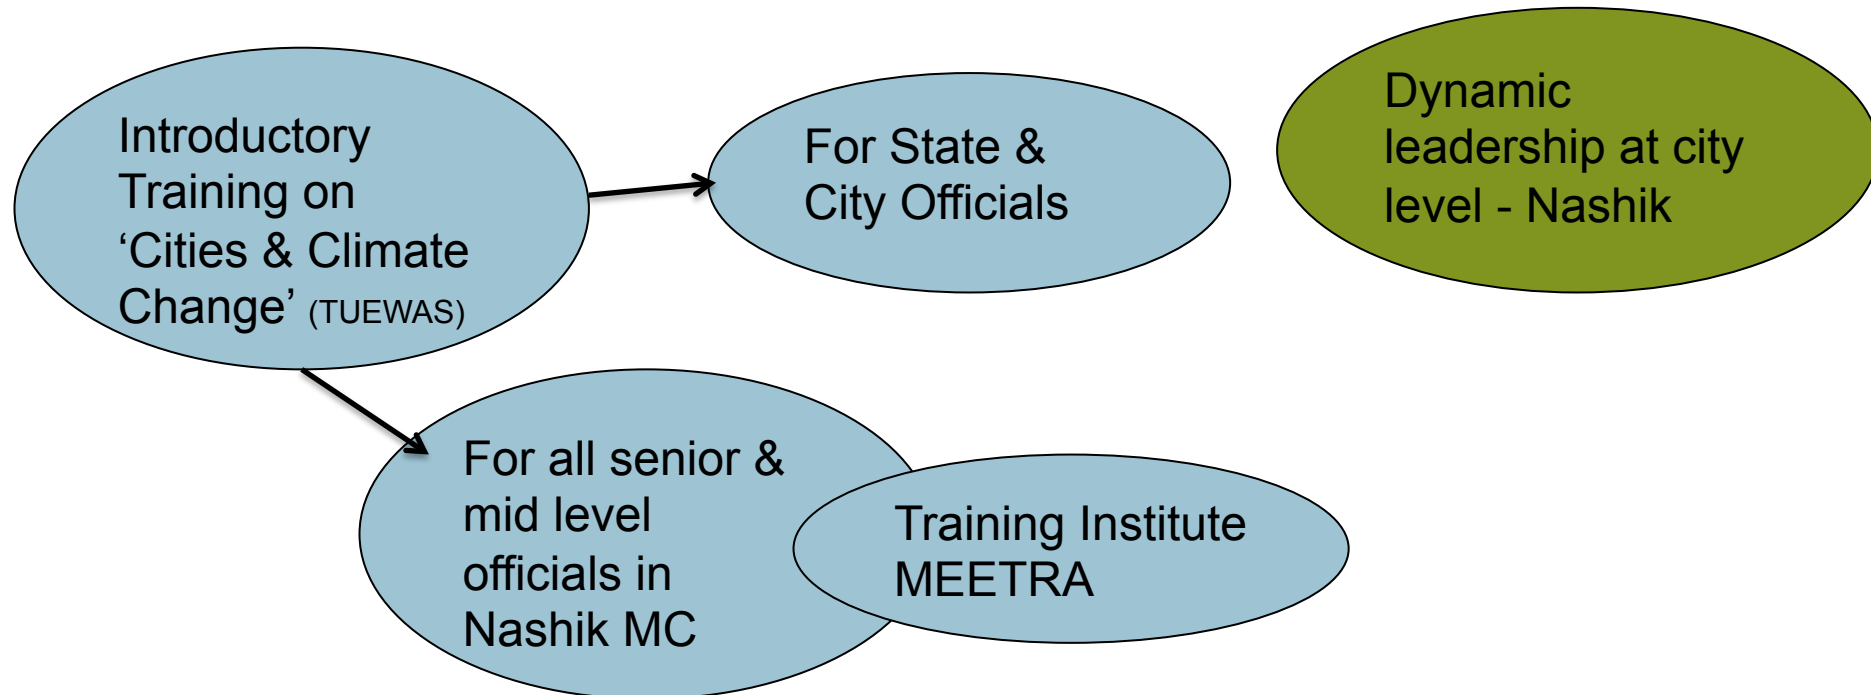

# Enabling Framework: National Mission on Sustainable Habitat

# Introductory Training on Urban Climate Change Why Nashik?

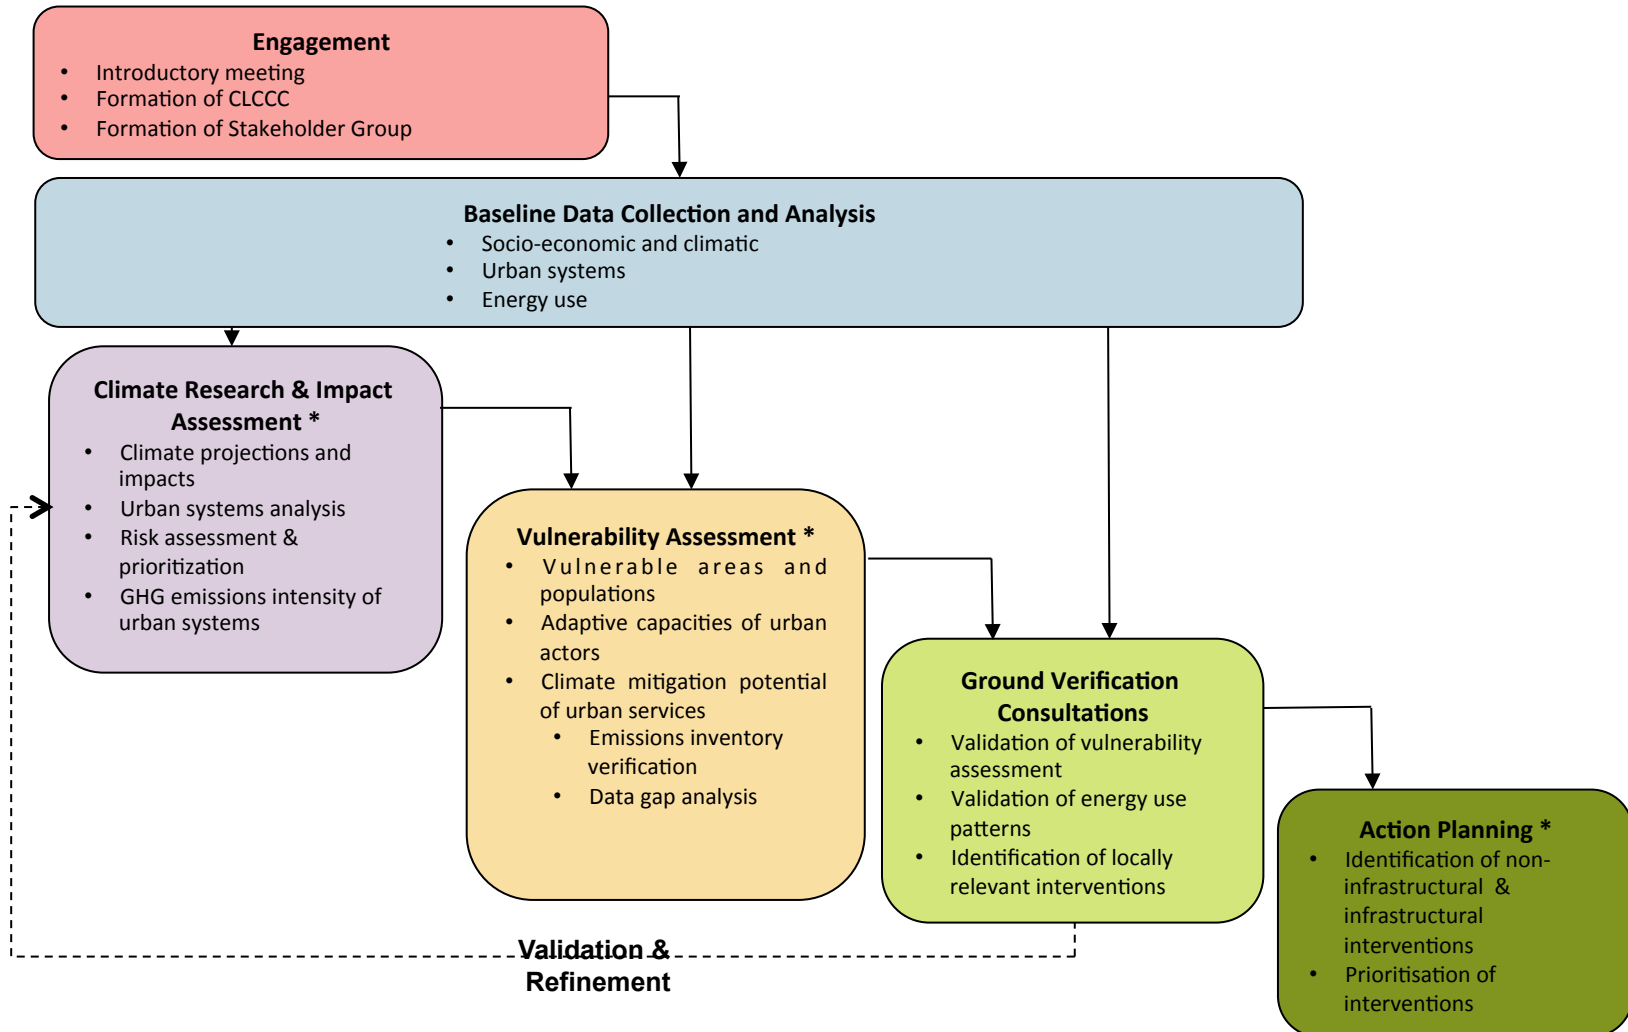

## About Nashik: Socio Economic Data

Particulars	Unit	Data
Total population	Number	1.486 million (2011)
Population break up: gender: no of females/ 1000 males	Number	894 (2011)
Population density: average	No./ Sq.km	4016
No of households	Number	330,438
Average size of household	Number	4 – 5
Floating population	Number	1,000,000
Average literacy rate	Percentage	80.57%
Literacy distribution (M/F)	Percentage	M- 83.89% ; F- 76.86%
Population living in slums	Number	0.273 million (2011)

# SUHAP Methodology

*\* Shared Learning Dialogues to be conducted at this point*

## Sectors for Energy Consumption

- Energy Consumption in residential, commercial / institutional, industrial / other buildings
- Energy consumption in urban transport (fuel consumption)
- Energy consumption in water supply
- Energy consumption in waste water (sewerage)
- Municipal Solid Waste (MSW)

\* Data Collection formats that combine adaptation and mitigation for each sector are used.

# Average Annual Rainfall & Temperature

Source: IMD

- The historical data shows a downward trend in annual rainfall from 1970 to 2010
- No significant change in the average annual maximum and minimum temperatures

# Heat Plus

## *A one stop tool for cities to calculate, mitigate and monitor the GHG emissions*

[Forgot Password?](#)

### Overview

ICLEI's online GHG emissions inventory tool, HEAT+ helps local governments account for GHG emissions, Common Air Pollutants (CAP) and other Volatile Organic Compounds (VOC).

The accounting and database capabilities of HEAT+ have helped several local governments make informed decisions in formulating targeted action plans by

### Key Features

On one single platform, HEAT+ enables cities to

- Prepare Inventory and forecast emissions
- Prepare Action Plans
- Track commitments
- Measure progress against targets
- Inform policy decisions
- Determine Priorities

### Operated by

### Reporting via

# Energy Consumption and Emissions

### Pattern of Energy Consumption in Nashik City, 2012-13

- Energy Consumption in Buildings
- Transportation
- Water Supply
- Waste Water
- Municipal Solid Waste
- Others

### Pattern of Emissions in Nashik, 2012-13

- Energy Consumption in Buildings
- Transportation
- Water Supply
- Waste Water
- Municipal Solid Waste
- Others

- The study reveals that all activities in Nashik city contributed 2.85 million tCO<sub>2</sub>e in 2012-13
- Per capita emission for Nashik city is 1.7 t/ Year in 2012-13.

## Expected Climate Impact Trends in Nashik

Increase in temperature: greater number of days with high temperatures expected by 2030

Changes in precipitation pattern: higher frequency of high intensity precipitation events expected

### Sources: Mainly secondary data

- 4x4 Assessment Report of GoI (2010)
- Study by TERI and the Hadley Centre for Climate Prediction and Research
- Local perceptions and experience

# Anticipated Climate Impacts on Urban Systems

Sectors	Potential Climate Impacts
Solid waste	<ul style="list-style-type: none"> <li>• Improper disposal of solid waste can cause blockages in drainage systems resulting in a potential increase in water logging incidences due to high intensity rainfall events</li> <li>• Rising temperatures increase the risk of landfill fires</li> </ul>
Storm water	<ul style="list-style-type: none"> <li>• Climate projections indicate an increase in the number of days with rainfall greater than 25mm/day. As a result increased incidences of waterlogging can be expected even though currently this is not a threat. This could lead to increased maintenance costs for the Municipal Corporation</li> </ul>
Urban planning	<ul style="list-style-type: none"> <li>• Increasing temperatures coupled with the ongoing urbanisation process will cause energy and water demands to increase beyond what may be planned for.</li> <li>• Further, increasing high intensity rainfall events could lead to greater chances of water logging if land use plans do not take into consideration natural / constructed drainage systems as well as the preservation of water recharge zones</li> </ul>
Water supply	<ul style="list-style-type: none"> <li>• With an expected increase in average temperature and a greater frequency of days with extremely high temperatures, the demand for water could exceed the projected figure that the new water supply scheme is targeting.</li> </ul>
Sewerage	<ul style="list-style-type: none"> <li>• Improper disposal of sewerage can compound health problems of local communities, especially those in slums, during water logging incidences caused by high intensity rainfall events.</li> </ul>
Transport	<ul style="list-style-type: none"> <li>• Increased traffic leads to increased local emissions</li> </ul>
Energy	<ul style="list-style-type: none"> <li>• Increased average temperatures and greater incidences of days with extremely high temperatures would lead to increased demands on energy for cooling, disrupting the existing demand-supply balance</li> </ul>

# Risk Assessment

- **Risk = Likelihood x Consequence**
- **Likelihood** of occurrence of each of the impact
- **Consequence** in terms of impact on the urban system and the city government if the impact does take place

## Summary of a Risk Matrix

Likelihood	Consequences				
	Insignificant	Minor	Moderate	Major	Catastrophic
Almost certain	Medium (RS* = 5)	Medium (RS = 10)	High (RS = 15)	Extreme (RS = 20)	Extreme (RS = 25)
Likely	Low (RS = 4)	Medium (RS = 8)	High (RS = 12)	High (RS = 16)	Extreme (RS = 20)
Possible	Low (RS = 3)	Medium (RS = 6)	Medium (RS = 9)	High (RS = 12)	High (RS = 15)
Unlikely	Low (RS = 2)	Low (RS = 4)	Medium (RS = 6)	Medium (RS = 8)	Medium (RS = 10)
Rare	Low (RS = 1)	Low (RS = 2)	Low (RS = 2)	Low (RS = 4)	Medium (RS = 5)

# Summary: Sector-wise Climate Risk Profile

Sectors	Associated Impacts	Perceived Risk Status	Additional Associated risks (Mitigation)				
Urban Planning	Vertical expansion.	High	NA				
	Pressure from peri- urban areas.						
	Lack of green belts.						
	Lack of land allocation for service infrastructure / utilities						
Water Supply	Unaccounted for water.		High	It accounts for 1.07% of total city GHG emissions			
	Increased water demand due to increase in temperature.						
Transportation	Lack of efficient public transport system for peri-urban areas			High	It accounts for 10.68% of total city GHG emissions of which 9.86% is due to fuel used in transportation and 0.81% is due to street lighting electricity consumption		
	Traffic congestion.						
Sewerage	River pollution due to sewerage outfall.				High	It accounts for 0.16% of total city GHG emissions	
	Lack of sewerage system in slum areas.						
Solid Waste Management	Inadequate solid waste processing (Segregation, C&D, Processing plants).	High				It accounts for 0.05% of total city GHG emissions of which 0.01% is due to waste processing and 0.04% is due to waste transportation.	
	Solid waste dumping in open natural drains.						
Energy	Increase in energy demand due to increase in temperature.					High	It accounts for 60.18% of total city GHG emissions
Storm Water	Water Logging - Rainfall beyond 27 mm/hour		Medium				

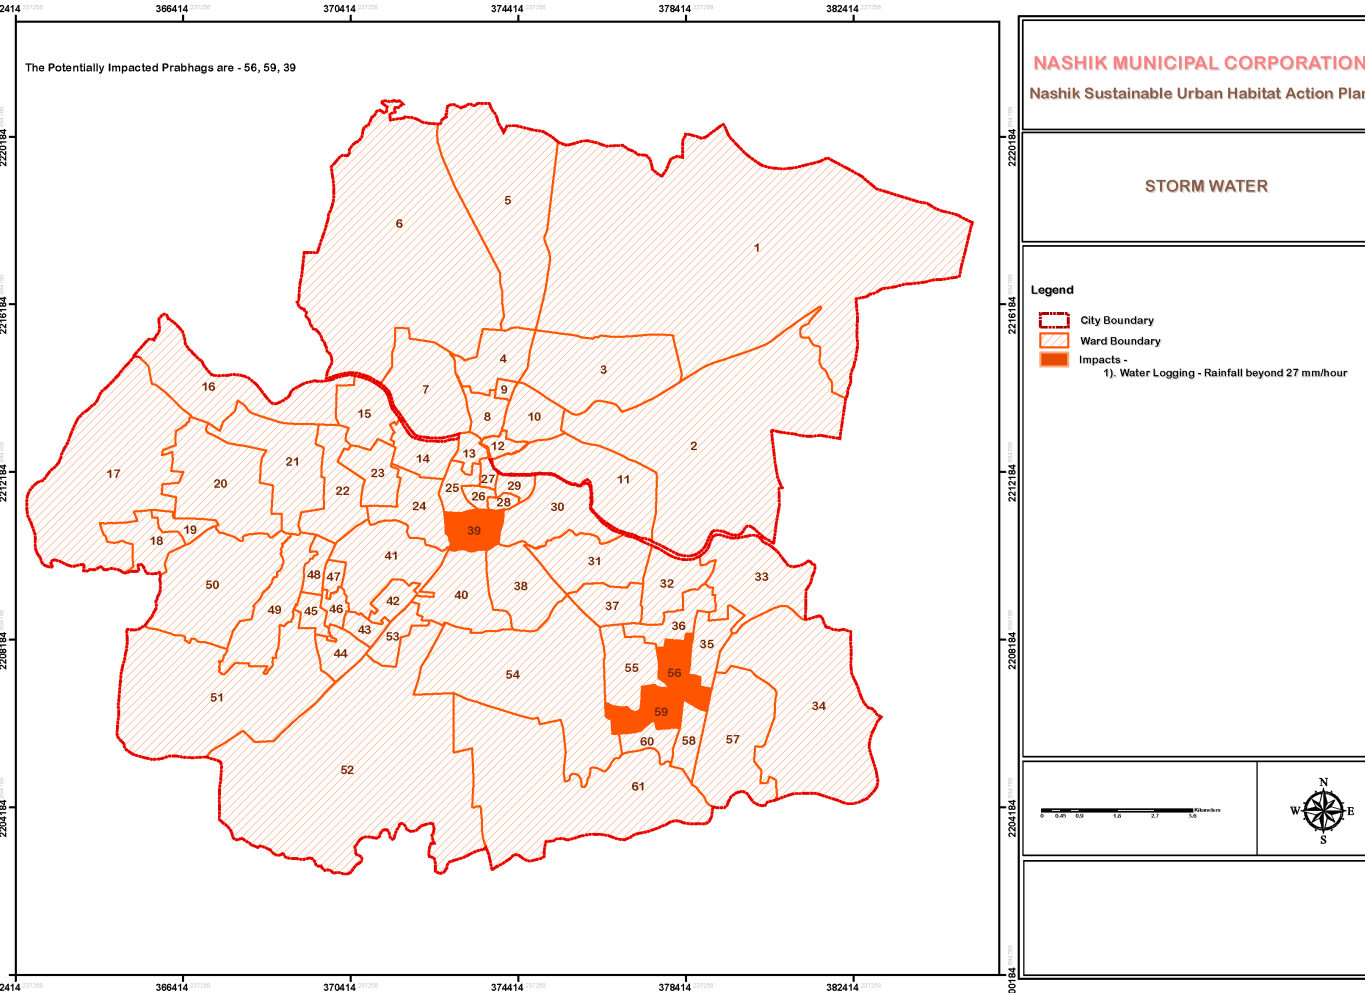

## Vulnerability Assessment: Areas & Social Groups

- Identification of affected areas and urban actors
- Assessment of adaptive capacity of each urban actor based on

Key Capacities of Actors	Score
<b><i>Responsiveness</i></b>	
Low capacity to organize and re-organize in response to threat or disruption	1
Medium capacity to organize and re-organize in response to threat or disruption	2
High capacity to organize and re-organize in response to threat or disruption	3
<b><i>Resourcefulness</i></b>	
Low capacity to identify and anticipate problems, establish priorities and mobilize resources for action	1
Medium capacity to identify and anticipate problems, establish priorities and mobilize resources for action	2
High capacity to identify and anticipate problems, establish priorities and mobilize resources for action	3
<b><i>Capacity to Learn</i></b>	
Low capacity to avoid repeated failures, and innovate to improve performance	1
Medium capacity to avoid repeated failures, and innovate to improve performance	2
High capacity to avoid repeated failures, and innovate to improve performance	3

# Urban Actors Analysis

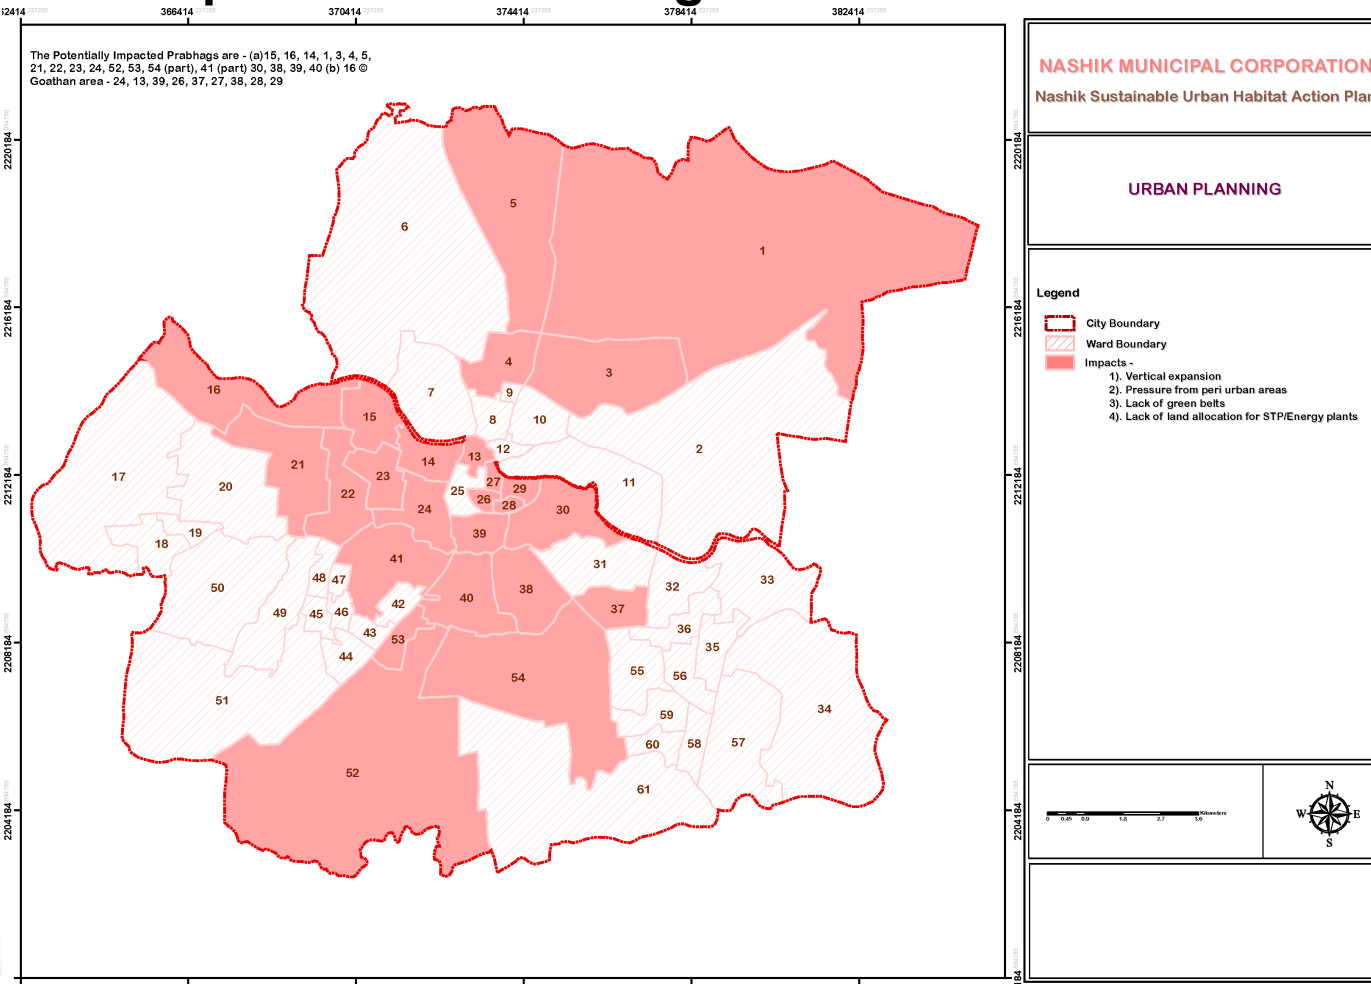

## Example: Urban Storm Water Drainage

<u>Actors</u>
<p><b><u>Vulnerable</u></b></p> <ul style="list-style-type: none"> <li>- Slum dwellers on river bank and near major city nallahs.</li> </ul>
<p><b><u>Supporting</u></b></p> <ul style="list-style-type: none"> <li>- Public Works Department (NMC)</li> <li>- Drainage Department (NMC)</li> <li>- Irrigation Department</li> </ul>

# Urban Actors Analysis

## Example: Urban Planning

### Actors

#### Vulnerable

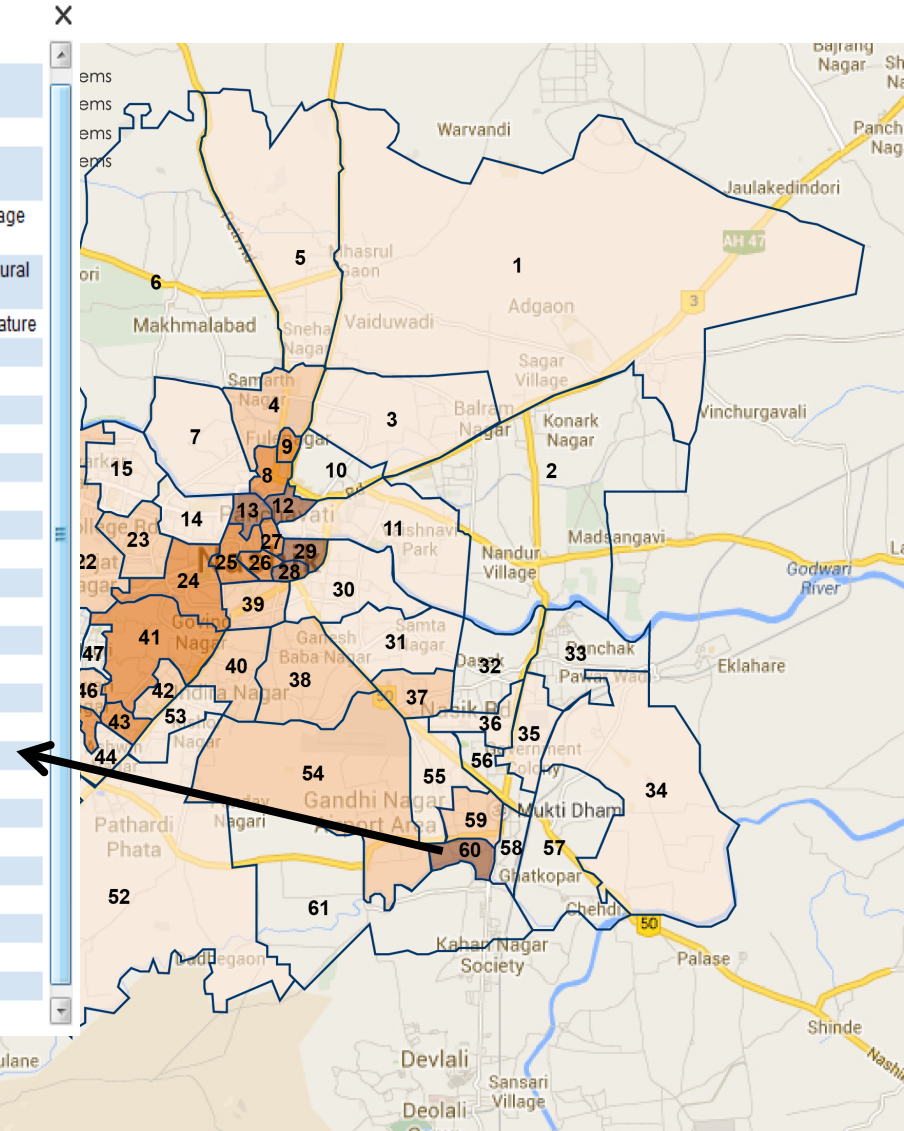

- Citizens of Nashik in general
- Industries
- Maharashtra State Electricity Distribution Co. Ltd

#### Supporting

- Nashik Municipal Corporation
- Government of Maharashtra
- Builders and real estate developers
- Financial institutions

# Climate Risk Mapping

Ward_No	60
OVERALL RISK - No. of Sectors with (of 7 Sectors) "HIGH" deg. of Risk?	4
<b>SECTORS &amp; POTENTIAL IMPACTS</b>	
1	WATER SUPPLY [Degree of Risk: High] (A) Unaccounted for water; (B) Increase in water demand due to increase in temperature
2	SEWERAGE [Degree of Risk: High] (A) River pollution due to sewerage; (B) Lack of sewerage system in slum areas
3	SOLID WASTE MANAGEMENT [Degree of Risk: High] (A) Solid waste dumping in open natural drains; (B) Inadequate solid waste processing (segregation, C & D, processing plants)
4	ENERGY [Degree of Risk: High] (A) Increase in energy demand due to increase in temperature
<b>VULNERABLE ACTORS</b>	
1	Residential Sectors (High/ Medium/ Low Income Group, Slum Dwellers)
2	Tourists/ Pilgrims/ Floating Population
3	Builders and Developers
4	Hotels/ Private offices
5	Hospitals
6	Educational Institutions
7	Industries (Small/ Medium/ Large scale)
8	Commercial establishments (medium or, small sized shops/ flower vendors/ hawkers)
9	Students
10	Employees (Government/ Private sector)
11	Educational Institutions
12	Farmers
13	Regular/ Irregular Laborers
<b>POTENTIAL SUPPORTING ACTORS</b>	
1	Nashik Municipal Corporation (or, NMC)
2	Water Supply Department, NMC
3	Health Department, NMC - (for daily cleaning, sweeping, garbage collection)
4	Public Works Department, NMC - for cleaning nallahs
5	Drainage Department, NMC - for regular choke up removals, sanitation measures
6	Maharashtra State Road Transportation Company (or, MSRTC)
7	Maharashtra Pollution Control Board (or, MPCB)
8	Slum Dwellers (all age group)
9	Government of Maharashtra

# Urban Systems Analysis

## Urban Planning

<p><b>Issues:</b></p>	<ul style="list-style-type: none"> <li>• Vertical expansion of the city is being planned, which will require the provision of basic services – this could be a challenge.</li> <li>• Lack of land allocation for infrastructure that would support improved provision of basic services</li> <li>• Pressure from peri-urban areas on urban services is growing due to increase in population in the outer periphery areas of the city. In future there are chances of these areas merging into the city limit, which will necessitate the supply of urban services by the corporation to these areas.</li> </ul>
<p><b>Existing / Planned Measures:</b></p>	<ul style="list-style-type: none"> <li>• The Development Plan and City Development Plan for Nashik are being revised</li> </ul>
<p><b>Potential Climate Impacts:</b></p>	<ul style="list-style-type: none"> <li>• Increasing temperatures coupled with the ongoing urbanisation process will cause energy and water demands to increase beyond what may be planned for.</li> <li>• Further, increasing high intensity rainfall events could lead to greater chances of water logging if land use plans do not take into consideration natural / constructed drainage systems as well as the preservation of water recharge zones</li> </ul>

# Findings: Ground Verification

## Panchvati Division – Issues and Solutions

Relevant Sector	Critical Issues	Potential Solutions
Urban Storm Water Drainage	Water Logging – beyond 70 mm / hour	<ul style="list-style-type: none"> <li>Reducing waste generation at source</li> <li>improved systems for waste disposal</li> <li>frequent maintenance of sewerage lines</li> </ul>
Urban Storm Water Drainage; Solid Waste	Drainage system in Slum Areas – ward 8 & 9	<ul style="list-style-type: none"> <li>Reducing waste generation at source</li> <li>Improved systems for waste disposal</li> <li>Frequent maintenance of sewerage lines</li> </ul>
Water Supply	Un – accounted / unmetered water supply in Slum Areas – ward 8 & 9	<ul style="list-style-type: none"> <li>Metering of water used for municipal purposes</li> <li>rain water harvesting to be enforced in new building – retrofitting in community buildings</li> </ul>
Energy	High energy use in ward no. 12 – community halls, lodges, ashrams	<ul style="list-style-type: none"> <li>Mandatory solar power in residential areas</li> </ul>
Transportation	Road congestion due to parking / narrow streets	<ul style="list-style-type: none"> <li>Alternative parking</li> <li>Comprehensive mobility plan</li> <li>NMT plan</li> <li>improved public transport</li> <li>intermediate public transport</li> </ul>
Sewerage	Awareness about Sulabh toilets	<ul style="list-style-type: none"> <li>Running awareness programs</li> <li>Training for municipal corporation officials</li> </ul>
Urban Planning	Open Spaces, maintaining of green areas and agriculture areas	<ul style="list-style-type: none"> <li>Tree Plantation</li> <li>ground water recharge</li> <li>urban agriculture – solar water pumps</li> </ul>

# Snapshot Action Plan

## Water Supply

CLIMATE ACTION PLAN			
	Short / Medium / Long term*	Indicative Capital Cost* (Low/Med./High)	Potential Co- benefits
<b>Policy / Non-infrastructural Measures</b>			
A review of the functioning of the water metering system and undertake corrective measures for improving cost recovery	Medium	Low	Water conservation encouraged
Undertake regular checks to detect water losses in the system due to leakages and thereby reduce the amount of non-revenue water	Short & medium term	Low	Energy saved and emissions reduced due to more efficient pumping
Enforcement of rainwater harvesting byelaws to new and old constructions	Short term	Low	Potential for saving energy spent on pumping water
Awareness generation campaigns for the conservation of water resources	Short term	Low	Mobilizing community participation
Promote use of smart water saving fittings in residential and commercial complexes	Medium term	Low	
Implement the recommended actions for water supply as per the City Sanitation Plan for Nashik City, for example: <ul style="list-style-type: none"> <li>Implement automated SCADA based monitoring at WTPs and distribution stations for effective monitoring and baseline information capture on water flows</li> <li>Install Bulk Metering at various points in the water supply network</li> <li>Implement regular meter reading to effectively implement volumetric water tariffs</li> </ul>	Medium  Short  Short	Low – Medium	
District water area maps should be generated	Short	Low	
<b>Infrastructural Measures</b>			
Existing unmetered water connections to be identified and water meters to be installed	Short term	Low (considering 95% coverage achieved)	Water conservation encouraged
Retrofitting of all institutional, offices and community buildings e.g.	Short term	Low	Reduced energy consumption for

Dharamshalas, Ashrams in Old Nashik area (parts of Nashik East and Panchavati Divisions) to harvest rainwater			pumping of water – reduced emissions
Timely and effective repair and maintenance of community taps to reduce wastage (esp. in slum areas)	Short term	Low	Improved cleanliness and resulting health benefits
Use of power saver devices in the pump houses based on regular water-energy audits in: <ul style="list-style-type: none"> <li>2 raw water pumping stations (Gangapur and Darna)</li> <li>5 Water Treatment Plants (Nashik Road, Gandhinagar, Panchavati, Bara Bungalow, Shivaji Nagar)</li> <li>Booster stations (spread across the city)</li> </ul>	Short term	Low – Medium	Energy saving
Installation of variable speed drivers (VSDs) to adjust to the requirements of the water being used in pump houses, commercial and institutional complexes	Short term	Low	Energy saving
Use of star rated pump sets, motors and transformers for industries in Nashik	Short term	Low	Energy saving
Demarcation of natural drainage systems that traverse the city and undertake watershed management activities in the upstream sections to reduce runoff and increase groundwater recharge	Short - Medium term	High	Reduction in incidences of water logging
Assessment of old water supply lines and redesigning and by laying new ones, as appropriate, to cater to increasing demands (New Nashik and Nashik West Divisions)	Medium – Long term	High	
Develop supply network infrastructure to allocate type of water (treated, raw) according to the proposed use e.g. drinking / domestic use quality not to be used in home gardens – raw water to be used	Medium – Long term	High	Reuse of wastewater

\*Note: **Short term:** 0-3 Years; **Medium term:** 3-10 years; & **Long term:** 10 + years

**Low capital cost:** covered by city budget; **Medium capital cost:** city requires partial financial support; **High capital cost:** city requires substantial financial support

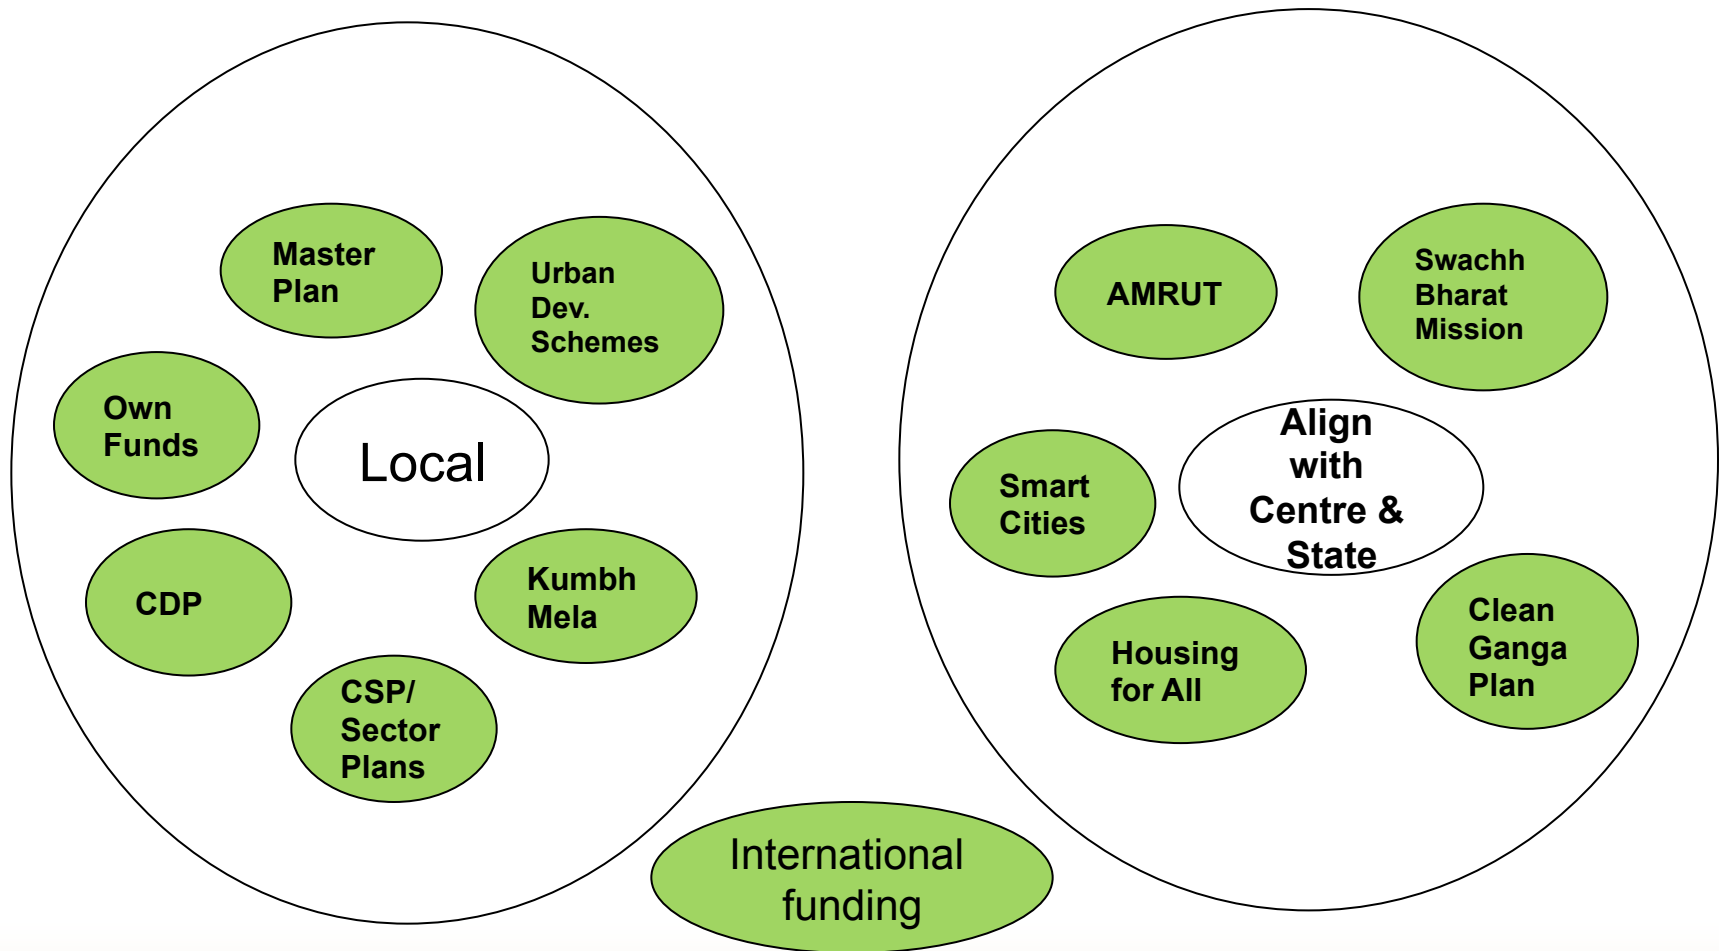

# Prioritized Actions and Indicative Costing

## Energy Consumption in Buildings

Policy and Institutional Measures	Cost per unit and description	Rank	Total Cost (Lakh INR)
Exercise regular energy audits of the industrial units	For small scale industries	1	15
Enforcement of bye laws for the use of solar water heaters in domestic, commercial and industrial buildings	Cost of training 30 people for 3 days. It includes the cost of experts, training material etc.	1	2.4
<b>Infrastructural Measures</b>			
Installing Solar PV systems in 105 municipal schools in Nashik: - 1KW PV system for 80 schools that consume up to 1000 kWh of electricity per year - 2-3KW PV system for 20 schools that consume 1000-2000 kWh of electricity per year - 5KW PV system for 5 schools that consume more than 1000-2000 kWh of electricity per year	Rs. 100 / - per watt peak for the systems upto 100 kWp	1	165
Installing 5-15 KW Solar PV systems in various municipal office buildings: - Installation of a 5 KWp Solar PV system in 10 number of municipal office buildings. - Installation of a 10 KWp solar PV system each in 6 number of office buildings - Installation of a 15 KWp solar PV system in 3 number of municipal buildings	Rs. 100 / - per watt peak for the systems upto 100 kWp	2	155
<b>Total</b>			<b>337.4</b>
<b>Budget available for the sector</b>			<b>4614</b>
<b>Percentage total cost of the budget for the sector</b>			<b>7.31%</b>

## Implementation & Way Forward...

**THANK YOU**
